

Создание ASP.NET Core MVC приложения с хранением данных в памяти

1. Создание проекта

```
dotnet new mvc -n MyMemoryApp
cd MyMemoryApp
```

2. Модель Product (Models/Product.cs):

```
public class Product {
    public int Id { get; set; }
    public string Name { get; set; }
    public decimal Price { get; set; }
}
```

3. Хранилище данных (Services/ProductService.cs):

```
private static List<Product> _products = new() {
    new Product { Id = 1, Name = "Яблоко", Price = 0.5m },
    new Product { Id = 2, Name = "Хлеб", Price = 1.2m },
    new Product { Id = 3, Name = "Молоко", Price = 1.5m }
};
```

Методы: GetAll(), Get(id), Add(product), Delete(id)

4. Регистрация сервиса (Program.cs):

```
builder.Services.AddSingleton<ProductService>();
```

5. Контроллер Products (Controllers/ProductsController.cs):

```
public class ProductsController : Controller
{
    private readonly ProductService _service;

    public ProductsController(ProductService service)
    {
        _service = service;
    }

    public IActionResult Index()
    {
        var products = _service.GetAll();
        return View(products);
    }

    public IActionResult Create() => View();

    [HttpPost]
    public IActionResult Create(Product product)
    {
        _service.Add(product);
        return RedirectToAction("Index");
    }

    public IActionResult Delete(int id)
    {
        _service.Delete(id);
        return RedirectToAction("Index");
    }
}
```

6. Представления:

- Views/Products/Index.cshtml: вывод списка продуктов, удаление.
- Views/Products/Create.cshtml: форма добавления продукта.

7. Запуск:
